Lab 09

3/28/17

1. My program successfully opens myIncome.txt and uses fscanf() to print the file. The function loadMyIncome() checks to see if the file was opened and if it was it uses fscanf() to print each word of the file. The function then closes the file. The function fscanf() prints a single word compared to an entire line which is why the outputs look different.

```
C:\Users\iamam\Desktop\School\CECS 130\Labs\Lab_09\Lab_09.exe

Opened myIncome.txt successfully.

January
Income
=
$2000
February
Income
=
$4000
