Assignment 08

4/10/17

1. My program successfully creates a class for three dimensional vectors that includes a constructor that initializes all the instances to zero. The class also includes accessor methods, mutator methods, print methods, and an add method that adds two vectors together. My main class tests the Vector class and all its methods.

```
C:\Users\iamam\Desktop\School\CECS 130\HW\HW 8\assignment_08.exe
Create a vector
New Vector Created.
Initializes instances to zero
(0,0,0)
Change the vectors instances
(5,6,8)
Create a second vector and change its instances
New Vector Created.
(8,9,10)
Add the second vector to the first and print the first vector
(13,15,18)
