Lab 01

1/17/16

My program converts feet to centimeters and then returns a statement saying how many centimeters are in one foot.

The screenshot displays the Dev-C++ IDE interface. The main window shows the execution of a program, with the following output:

```
Select C:\Users\iamam\Desktop\School\CECS 130\Lab 01\Lab_01.exe
1 feet is 30 centimeters
3 feet is 90 centimeters
6 feet is 180 centimeters
-----
Process exited after 0.01633 seconds with return value 0
Press any key to continue . . .
```

The bottom panel shows the 'Compiler' tab with the following compilation results:

```
Compilation results...
-----
- Errors: 0
- Warnings: 0
- Output Filename: C:\Users\iamam\Desktop\School\CECS 130\Lab 01\Lab_01.exe
- Output Size: 127.931640625 KiB
- Compilation Time: 0.20s
```

The status bar at the bottom indicates the current line is 28, column is 5, and the selection is 0. The total lines in the file are 37, and the length is 471. The IDE is running on Windows 10, as indicated by the taskbar and system clock showing 2:34 PM on 1/17/2017.
